The game will be called “Timith's Mediocre Day” and will consist of the most mediocre things you can imagine. You will play as Timith, and your time will be spent working at a convenience store, cashing out customers. The core gameplay will be relatively simple: a customer's total will ring up to a specific predetermined amount they give you cash, and you count and give back the correct change. If your drawer at the end of the shift is too far below the sales (you gave too much change back, exceeding 5$ in total errors), you get fired, or if you get 3 customer complaints (you didn't give enough change back 3 different times), this will also result in termination. There will also occasionally be unruly customers, in which case you must choose the correct dialogue to make them leave otherwise, you will receive a customer complaint.

Unruly customers will use an orange generic person as their actor, and it will randomly decide whether it's one of three type a rude, loud teenager, a drunk, or a customer who insists on free or discounted items, and each of these will have 3 dialog options, with one being “correct” and the others will result in a complaint against you. They will appear in place of a normal customer at the register at about a ⅕ chance of occurring for every customer, with a cooldown window of 3 customers before it can occur again.

Standard customers will use a green generic person as their actor. These customers will only ever buy a single item each with preset prices, and the item's price will automatically be displayed, and the customers will randomly pay any amount greater than the item cost but less than 50 that is divisible by 5 (most likely), or the total rounded to the next dollar(moderate chance), or exact change(least likely). The exchange will be initiated on key press e. As previously mentioned, you can go over or under both, causing more progress toward either the complaints or short draw fail conditions. There will be a total of 15 customers that need to be processed before your shift ends.

The player actor will be represented by a man in a blue business suit (overdressed for a convenience store), while you can move around the stor there's little reason to, as interactions occur at the counter. There will be very little based on this actor beyond movement, starting interactions, and holding some vars (complaints/how short the drawer is), and based on those vars, display how close/far you are from getting fired
