How to play Timith's mediocre day:

The gameplay is rather simple and approachable. You will play as timith for a night shift at the convenience store he works for. You will be tasked with checking out customers and dealing with the problematic ones and you will need to process 15 of them

Your tasks consist of taking their money and giving them back the correct change for the regular customers. Occasionally you will need to handle a problematic customer, in which case you will need to choose the correct dialog to deal with the situation.

You can lose under two circumstances, the first being that your drawer is 5$ short at the end of your shift, or that your complaint counter rises to 3 (achieved through giving too little change and incorrectly handling a problem customer).

The player character appears as a man in a blue suit, the customers as green generic people, and problem customers as generic orange characters.
